Abstract:

The article presents the first results of our system applied to the automatic re handwritten dates on Brazilian bank checks. Considering the omni-writer con detail our recognition module dedicated to processing the month field. This m based on the combination of holistic and analytical approaches with a fixed le approaches operate with a single explicit segmentation technique to provide a sequence for the purposed hidden Markov models of each recognizer. We sho significant improvements when combining both modules to get a satisfactory rate considering the small database images we work with. Finally, we presen perspectives for future work
